SYLLABUS DEL CORSO

Corporate Finance & Accounting

2526-1-F1602M007

Learning objectives

The course aims to develop basic knowledge and skills necessary to operate as a financial analyst professional in the investment community or as a financial manager in the corporate sector. Accounting and corporate finance topics are duly discussed across the course.

Beyond basic principles of the discipline, the course will focus on more specific topics, namely business valuation, merger acquisitions and IPO that can help students complete their competences on private equity or corporate banking professional world.

Contents

The course is based on two modules.

The first one deals with corporate finance basics covering topics from traditional accounting financial analysis to cost of capital and Modigliani Miller Theorems. The module focuses also on more advanced topics considering business valuation methods and mergers and acquisitions.

The second module addresses more advanced accounting topics, such as the main difference between international and domestic accounting principles and the hedging accounting standards.
