

UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Mutagenesi del Gene Malattia

2526-1-F0602Q116-F0602Q11602

Aims

The course will be multidisciplinary and organized in modules in order to offer an overview of genetic, molecular, biochemical, physiological and pharmacological aspects of a human disease.

The focus of the course will be the study, from different perspectives, of a genetic disease, from diagnosis to treatment.

In particular, at the end of the course the student will have acquired the following skills:

- 1. knowledge and understanding: complete overview with different integrated approaches of a specific human genetic disease
- 2. applied knowledge and understanding: apply what has been learned to the study of numerous human genetic diseases
- 3. self-judgment: capacity to critically evaluate what has been learned
- 4. oral competences: oral communication of what has been learned using the correct scientific terminology
- 5. ability to learn: critical learning and understanding of scientific literature on different aspects of a human disease.

In the academic year 2025-2026 the genetic disease studied will be Cystic Fibrosis.

Contents

Site-specific mutagenesis approaches and in silico design of constructs

Detailed program

The Molecular Biology module includes:

- -discussion of site-specific mutagenesis approaches
- -design of the mutagenesis strategy

Prerequisites

Basic knowledge in molecular biology

Teaching form

The course required attendance (10 hours/1 CFU). It consists in lessons composed by:

- a section (2 hours) of delivered didactics (Didattica erogativa, DE) focused on the presentation of contents by the lecturer.
- a section (8 hours) of interactive teaching (Didattica Interattiva, DI) including integrative didactic interventions by external experts, group works, reverse teaching with the student's personal involvement. Visits to centers of excellence in the study of the pathology under consideration are also planned.

Textbook and teaching resource

Powerpoint presentations will be available on e-learning.

Semester

Second semester

Assessment method

The verification and evaluation of the student aims to be * innovative * compared to the classic methods.

The exam consists in the elaboration of the knowledges acquired during the course through a poster presentation, similar to what is carried out in scientific meetings.

The student will be evaluated by a commission in terms of: 1) expository skills on what is illustrated in the poster, 2) general knowledge of the pathology treated in the course, 3) first-hand participation in the activities carried out during the course, 4) graphic/display characteristics of the poster.

There are no ongoing tests.

Office hours

Upon appointment by e-mail (silvia.barabino@unimib.it)
