COURSE SYLLABUS

Clinical Psychodiagnosis

2526-1-F5111P005

Learning area

Models and Techniques for assessing psychological functioning

Learning objectives

Knowledge and understanding

- Psychological Assessment: different approaches to the psychodiagnosis
- Case Formulation
- Clinical relation to patient
- Assessment with children and adolescents
- Mentalization abilities assessment

Applying knowledge and understanding

- Objective test vs. performance based personality test
- Integrating the nomothetic and idiographic approach
- Methods to evaluate clinical alliance
- Developmental age and diagnostic setting: methods and perspective
- Methods to evaluate mentalization abilities

Making Judgements (Autonomy of Judgement)

The student is able to critically assess the appropriateness of the selected tools in relation to the clinical case and to reflect on the ethical and deontological aspects related to psychological assessment, also through:

Group work aimed at developing critical skills in the interpretation of diagnostic tools

Group discussions critically examining different types of clinical reports based on specific target populations

Communication Skills

The student is able to clearly and effectively communicate the results of psychodiagnostic assessment both to professional peers (using technical language) and to patients or service users (in an accessible and understandable form), including through written reports. Activities include:

Writing psychodiagnostic reports

Analysis of intervention contexts and implications for result communication

Learning Skills

The student has developed the ability to independently keep up to date with developments in the field of psychodiagnostics (e.g., new test editions, international guidelines, Italian validations), by researching and critically evaluating scientific sources.

They are also capable of reflecting on their own learning process and selecting areas for further study based on individual educational needs or clinical interests.

Contents

The course aims to present some of the psychological instruments used both in the clinical and research field. In the first part of the course, students will be presented with the diagnostic process within the context of adults patients. The second part of the course aims at providing theoretical and operational tools to work within developmental age.

Detailed program

- Psychological diagnosis
- Differences between descriptive and explanatory approach
- Integration of diagnostic approaches
- Tests: the basics
- Writing up diagnostic reports
- Developmental diagnosis
- Collaborative approach
- Mentalizing abilities assessment

Prerequisites

A good knowledge of the basis of Psychopathology and Interviewing technique enables a more aware use of the course contents. Students lacking such basic knowledge are encouraged to ask for a list of basic references.

Teaching methods

All lessons will be held in person.

In addition to classroom lectures (about 70%), part of the teaching will take place through the discussion of scientific articles, case studies, and exercises and discussions on the course topics.

The material (slides and, when possible, scientific articles) is made available on the e-learning site of the course, so

that it can also be used by non-attending students.

Assessment methods

The verification of learning will be carried out through a written test with two open questions aimed at verifying the specific knowledge of the main theoretical aspects of the course and the ability to connect different topics.

Only in case of passing the written test, the student accesses the optional oral exam which will focus only on the volume provided among those to be chosen. Further information will be provided at the beginning of the course.

Textbooks and Reading Materials

Erasmus students can take the exam in English and/or ask for an English bibliography.

Written examination

Dazzi, N., Lingiardi, V., Gazzillo, F. (2009). La diagnosi in psicologia clinica. Personalità e psicopatologia. Milano: Raffaello Cortina Editore
