### SYLLABUS DEL CORSO

# **Advanced Techniques for Sample Preparation**

2526-1-124R000

#### **Titolo**

Advanced techniques for sample preparation

#### Docente(i)

Veronica Termopoli

#### Lingua

**English** 

#### **Breve descrizione**

Sample preparation is a fundamental step of the analytical process. The appropriate use of the sample preparation techniques contributes to the success of the analysis. Beside traditional methods, innovative technologies for sample preparation in the framework of quality control and method development are available. They allow the reduction of time and consumption of solvents, and often the improvement of performance in terms of accuracy and robustness of the method.

The course will introduce principles and theory of the main sample preparation techniques for the extraction of organic species from aqueous and solid matrices, necessary before the final analytical determination, mainly carried out with chromatographic techniques. Particular attention is paid to innovative techniques and online

systems, which aim to reduce analysis times, sample manipulation (decreasing the risk of analyte losses) and solvent consumption.

Evaluation: YES - The final assessment will consist of an interactive multiple-choice test.

#### CFU / Ore

2 CFU - 16 Hours (Lecture)

## Periodo di erogazione

II semester
