SYLLABUS DEL CORSO

Crystallography and Laboratory of Xray powder diffraction

2526-1-124R021

Titolo

Crystallography and Laboratory of X-ray powder diffraction

Docente(i)

Chiara Ferrara ; Massimo Moret

Lingua

English

Breve descrizione

Program:

- Symmetry in crystals

- Examples of crystalline structures

- Mechanisms of Crystal growth

- Diffraction of X-ray by crystals

- Experimental methods in X-ray: from single crystals to powders

Objectives of the program:

To understand the role of symmetry in periodic structures, basics of crystal growth, theory of diffraction in crystals, the use of diffraction to study solids. To make and interpret experiments on powdered polycrystalline samples.

A final evaluation of the course is expected

CFU / Ore

2 CFU - 18 Hours (12h lectures - 6h laboratory training)

Periodo di erogazione

II semester

Sustainable Development Goals
