COURSE SYLLABUS

Surgical Specialty Nursing

2526-2-I0101D012-I0101D040M

Aims

General Objective
By the end of the course, students will have developed:

Knowledge and Understanding
The ability to demonstrate a solid understanding of nursing diagnoses related to surgical interventions in selected specialized fields.

Applying Knowledge and Understanding
The ability to plan nursing care by identifying priorities and adapting interventions based on the identified nursing diagnoses.

Making Judgements
The ability to develop critical thinking and independent professional judgement to support nursing care planning, through active learning methods, case discussions, and classroom exercises.

Communication Skills
The ability to communicate and justify nursing diagnoses and related care decisions effectively and appropriately, including in interprofessional contexts, through discussion and simulation activities provided during the course.

Learning Skills
An increased awareness of individual learning needs and the ability to enhance self-directed learning through clinical case analysis, active learning strategies, and participation in practical classroom exercises.

Specific Objectives
By the end of the course, students will be able to:

Knowledge and Understanding
For selected clinical scenarios in surgical specialties, describe:

- The most frequently observed clinical and care-related data
- The characteristic nursing diagnoses and related expected outcomes
- The priority nursing interventions
- The criteria and tools used to evaluate the achievement of care outcomes

Applying Knowledge and Understanding
Apply theoretical and practical knowledge in managing healthcare devices and performing technical skills related to nursing care for patients with specific nursing diagnoses in specialized surgical contexts.

Making Judgements
Develop the ability to recognize, analyze, and critically evaluate nursing diagnoses through guided discussions of clinical cases and active learning activities in the classroom.

Communication Skills
Use appropriate technical language to describe and discuss nursing diagnoses and planned care decisions, also through simulations and group activities.

Learning Skills
Improve autonomous and reflective learning skills through the analysis of proposed clinical situations, practical exercises, and peer and instructor interactions throughout the course.

Contents

The module addresses the nursing care process applied to persons undergoing surgery in selected areas of specialised surgery

Detailed program

Nursing assistance to person undergoing thoracic surgery
person undergoing partial/total pneumectomy. In-depth study on the management of pleural/thoracic drainage and recognition/management of major complications.

Nursing care of person undergoing gynaecological surgery
person undergoing gynaecological surgery of a benign or oncological nature. Focus on issues related to physiological and surgical menopause. Focus on the performance of bladder self-catheterisation.

Nursing assistance to the person undergoing cardiac surgery.
person undergoing myocardial revascularisation surgery, valvular valve repair/replacement surgery, cardiac transplantation and/or left ventricular assist device (LVAD) wearer (hint), effects of intraoperative extracorporeal circulation (ECC)
Insight into epicardial wire management and sternal wound dressing

Nursing the person undergoing abdominal surgery
person undergoing enteric ostomy or urinary diversion surgery. In-depth study of equipment management and management of enteric/urinary ostomies, colostomy irrigation, and recognition/management of major complications.

Nursing assistance to the person undergoing urological surgery
person undergoing nephrectomy (outline), prostate resection surgery, urological surgery in men (phimosis, varicocele, testicular cancer, etc.) Insight into male genital self-examination education, management of continuous

bladder washing

Nursing the person undergoing neurosurgery
person undergoing intracranial surgery. Insight into Intracranial Pressure (ICP) detection, management of the external ventricular shunt (DVE) and internal ventricular shunt (DVI) (hint);

Nursing care of the person undergoing ENT surgery.
person undergoing total laryngectomy, tonsillectomy. Insight into tracheostomy management and recognition/management of major complications.

Nursing care of person undergoing bariatric surgery
person undergoing sleeve gastrectomy surgery, gastric bypass, bilio-pancreatic diversion, adjustable gastric banding. Insight into dumping syndrome

Nursing assistance to person undergoing maxillo-facial surgery
child undergoing cleft lip and palate surgery, person undergoing post craniofacial trauma surgery

Prerequisites

Defined by the academic regulations.

Teaching form

10 lessons of 2 hours each, in the initial part, which is aimed at engaging the students in an interactive way in the following part (e.g. simulated cases, individual and/or group exercises, instructional videos, demonstrations). All activities are carried out in-person.
