SYLLABUS DEL CORSO

Ginecologia e Ostetricia

2526-2-I0101D009-I0101D028M

Aims

The course aims to provide students with basic skills in nursing care for people suffering from medical, pediatric and obstetric-gynecological pathologies. Students will be guided to acquire the theoretical and practical knowledge necessary to recognize care needs and plan targeted interventions, using nursing care process and health documentation tools.

Knowledge and understanding
At the end of the course, the student will be able to:
• Describe the main pathologies in the medical, pediatric and obstetric-gynecological field.
• Understand the basic diagnostic and therapeutic principles related to these pathologies.
• To know the specific care needs of the person suffering from medical, pediatric and obstetric-gynecological pathologies.
• Understand the nursing care process as a method to identify, plan and evaluate nursing interventions.
• Become familiar with clinical documentation tools.
Application of knowledge and comprehension skills
At the end of the course, the student will be able to:
• Apply the nursing care process in the management of the person with medical, pediatric and obstetric-gynecological pathologies.
• Systematically identify the person's care needs and formulate appropriate care plans.
• Use health documentation tools correctly and professionally to ensure continuity and quality of care.
• Develop the ability to analyze complex clinical situations, make reasoned judgements and propose effective nursing interventions.

Contents

Fundamental anatomy and physiology of the genital system. Physiological pregnancy and pregnancy "at risk": how to distinguish them? Protection of pregnancy and assistance. Main diagnostic techniques in obstetrics and their

indication. The birth event, fundamental elements of labor and delivery. Blood loss in the first trimester of pregnancy: the threat of abortion and spontaneous abortion, ectopic pregnancy. Blood loss in the second trimester of pregnancy: placenta previa, the untimely detachment of normal placenta. Pregnancy complicated by pathologies: preterm birth. Gestational hypertension and preeclampsia. Emergencies and obstetric emergencies: clinical and organizational elements. Caesarean section: clinical elements and social aspects. The pathology of the afterbirth and the puerperium. Methods for the regulation of births: main techniques, social and ethical aspects. Diagnostic techniques in gynecology: screening, techniques and indications. Early diagnosis in neoplasms of the lower genital tract, malignant neoplasms of the uterus and ovary. Triage in obstetrics and gynecology.

Detailed program

Fundamental anatomy and physiology of the genital system. Physiological pregnancy and pregnancy "at risk": how to distinguish them? Protection of pregnancy and assistance. Main diagnostic techniques in obstetrics and their indication. The birth event, fundamental elements of labor and delivery. Blood loss in the first trimester of pregnancy: the threat of abortion and spontaneous abortion, ectopic pregnancy. Blood loss in the second trimester of pregnancy: placenta previa, the untimely detachment of normal placenta. Pregnancy complicated by pathologies: preterm birth. Gestational hypertension and preeclampsia. Emergencies and obstetric emergencies: clinical and organizational elements. Caesarean section: clinical elements and social aspects.
