SYLLABUS DEL CORSO

Scienze Umane

2526-1-I0101D007

Aims

The course aims to provide students with the theoretical knowledge concerning psychological, social and anthropological elements of nursing profession in order to help them to adequately perceive their professional role in a complex context of networks and relationship, in a storical-antropological perspective and understand psychological and social mechanisms of uman behaviour.

Knowledge and Understanding
By the end of the course, students will be able to:
Know the fundamental principles of the social, anthropological, and clinical-psychological aspects pertinent to the midwifery profession.
Identify the main individual and collective psychological mechanisms that influence human functioning.
Applying Knowledge and Understanding
By the end of the course, students will be able to:
Apply acquired knowledge in social, anthropological, and psychological fields to adequately contextualize their profession within complex operational networks and relational contexts.
Utilize psychological concepts and humanistic perspectives to understand and respond to the individual and collective emotional and behavioral needs of patients and families in the obstetric setting.
Making Judgements
By the end of the course, students will be able to:
Critically evaluate the social, cultural, and psychological factors that influence health choices and patient experiences in obstetrics.
Formulate independent and informed judgments regarding the most appropriate approaches in complex relational situations encountered in professional practice, considering diverse humanistic perspectives.
Communication Skills
By the end of the course, students will be able to:
Communicate effectively with patients, families, and multidisciplinary team members, conveying complex information related to humanistic and psychological aspects clearly and empathetically.
Learning Skills
By the end of the course, students will be able to:

Develop the learning skills necessary to autonomously continue their professional and personal development in the human sciences, staying updated on new research and best practices in the social, anthropological, and psychological aspects of midwifery.
Reflect critically on their own professional practice from a humanistic perspective, identifying areas for continuous improvement and personal development

Contents

Topic of the Human Sciences course is to give students an overview of the anthropological, social and psychological aspects of health care professions.

Detailed program

CLINICAL PSYCHOLOGY - Psychology as a science of human behaviour, methodological aspects of psychological research, with specific attention to health care professions; main concepts of general and clinical psychology (structure of the mind, cognitive and dynamic processes, mental disorders, clinical relationship and psychotherapy) and the self-evaluation tools (anxiety, stress, burnout and quality of life tests), the psychological challenges of the nursing profession in relation to emergency services, primary care, intensive care and end-of-life care. The placebo effect in the care relationship and its implications. ANTHROPOLOGY - Medical anthropology, human health and disease; social processes and cultural representations of health, illness and related nursing/care practices; Disease, Illness and Sickness; narrative medicine: general principles; popular medicine and health anthropology in the developing countries.
