## COURSE SYLLABUS

### Childbirth - 5

2526-2-I0102D010-I0102D030M-T5

---

#### Aims

At the end of the course the student:

- will understand the physiology of the birth
- will be able to plan an evidence based midwifery care to the mother with normal birth and to her newborn
- will understand the changes associated to the normal birth and will be able to verify the maternal and fetal well-being during labour.

#### Contents

The course provides the students the essential elements to understand the physiology of the birth and provides the elements to plan an evidence based midwifery care.

#### Detailed program

The students will be able to plan and to provide an evidence base midwifery care during labour and birth in accordance with the Midwifery Partnership Model, the Midwifery Management, the international Classification Functions and evaluation scales. Definition of phases and times of the labour and birth. Psycho-neuro-endocrinology of the labour and birth. Obstetrical semiotics and objective midwifery examination in labour and birth. Midwifery models of care during labour and birth. The "mother friendly" midwifery care according to the UNICEF initiative "Together for breastfeeding". Psychological, emotional, social and cultural factors related to pain and childbirth. Recommended midwifery care to monitor, to support and to promote maternal-fetal-neonatal well-being and the normal evolution of the first, second, third and fourth childbirth stages. Prevention of perineal damage. Tools for midwifery care during labour and birth. The administrative documentation.

## Prerequisites

Students will receive a detailed bibliography before lessons start. They will have to study the material in order to be evaluated on the required basic skills.

## Teaching form

Lectures, practice exercises and group work.
