COURSE SYLLABUS

Midwifery: Competence and Professional Developments Areas

2526-3-I0102D914

Aims

Knowledge and understanding
To acquire in-depth knowledge related to the specialist areas of midwifery and clinical-diagnostic care networks, with reference to organizational models, operational protocols, and best practices in the midwifery field.

Applying knowledge and understanding
To apply theoretical knowledge to the management of clinical-care pathways in midwifery, integrating professional skills in the planning, implementation, and evaluation of interventions within the various care networks.

Making judgements
To analyze complex clinical-care situations and formulate critical and autonomous evaluations in the midwifery field. To support professional decisions based on scientific evidence and the specific context of clinical-diagnostic networks.

Communication skills
To communicate effectively with the multiprofessional team, with clients, and with caregivers, using appropriate technical language and relational strategies aimed at collaboration, support, and care continuity.

Learning skills
To develop continuous learning abilities in order to update and expand skills in line with the evolving scientific and organizational knowledge in the field of midwifery and care networks.

Contents

The contribution and responsibility of the midwife in obstetric surveillance: methods and tools

Detailed program

- Obstetric skills within clinical care networks
- active surveillance of maternal and neonatal mortality.
- Surveillance logs.
- Organizational aspects of the implementation of the Guidelines, prevention, surveillance and control

Prerequisites

None

Teaching form

Lectures and interactive lessons with exercises and case simulations.

Textbook and teaching resource

The materials used during the course will be provided directly by the teacher, together with indications for further study

Semester

1st and 2nd semester

Assessment method

Frequency

Office hours

On appointment
