SYLLABUS DEL CORSO

Progettazione e Coordinamento Assistenziale

2526-1-K0101D003

Aims

ORGANIZATIONAL AND CLINICAL ANALYSIS. The course provides students with the basic knowledge useful to understand the health organizations and to identify the different variables that affect its functioning. The function of nursing coordinators and directors will be discussed, underlying the process by which managers can match professional values and organizational ones, in order to meet the best professional and institutional standards. CARE ACTIVITY PLANNING. The acquired knowledge will give the basis of professional management with specific focus on the interpretation of the complex organizational dynamics. The course will give tools to develop organizational interventions for an efficient and effective professional action within the healthcare institutions.

Specifically:

Knowledge and Understanding

The student will know the principles and variables that influence healthcare organization. Additionally, the student will understand the concepts of managerial functions and their role in aligning professional ideals with organizational objectives. The student will know the theoretical foundations of planning care activities within healthcare settings.

Applied Knowledge and Understanding

The student will be able to apply tools for the organizational analysis of clinical and care structures. The student will use planning principles to propose organizational and managerial interventions within healthcare structures and will apply managerial models to facilitate cohesion between professionals and organizational objectives.

Independent Judgment

The student will develop the ability to critically evaluate the organizational dynamics of clinical and care structures. Additionally, the student will be able to recognize the strengths and weaknesses of the structures in which they operate, propose improvement interventions, and formulate judgments on the efficiency and effectiveness of organizational strategies adopted within services.

Communication Skills

The student will be able to use appropriate language to describe and analyze healthcare organization,

communicate improvement and planning proposals for care activities to colleagues and managerial figures, and actively participate in discussions and simulations on complex organizational cases.

Learning Skills

The student will acquire the skills necessary to develop the ability to independently update knowledge on organizational and managerial models within healthcare settings, integrate theoretical knowledge with field observation to enhance managerial competencies, and improve experiential learning for the efficient management of healthcare organizational processes.

Semester

First year, first semester

Assessment method

Oral examination and preparation of an academic essay. According to the contents of the course, the academic essay will include an organizational analysis of nursing and midwifery. Specific guidelines for the essay will be discussed by the teacher during lessons. Students will be provided by criteria used by teachers for its evaluation. The essay will be considered as 50% of the final evaluation. The oral examination will consist of three open questions at least (one on organizational analysis, one on planning of care activities, and one based on the analysis discussed in the essay).

Office hours

Agreed with teachers by e-mail.
