COURSE SYLLABUS

Software for experiments: Matlab

2526-127R-4

Title

MATLAB

Teacher(s)

To be defined

Language

English

Short description

The course aims to provide the fundamentals for programming in Matlab. Matlab is a versatile software used in various fields, including the programming of cognitive and psycho-physiological experiments. The software is one of the most widely used software in experimental research and cognitive neuroscience. In particular, it is well-suited for the integration in experimental contexts of physiological and behavioral data. There are Matlab tools for integrating and synchronizing data from different sources, such as physiological and behavioral data.
