## SYLLABUS DEL CORSO

### Topics on Microelectronics

2526-113R029

---

#### Title

Topics on Microelectronics

#### Teacher(s)

Andrea Baschirotto (scientific director, organizer and coordinator)

#### Language

English

#### Short description

The main aim of the Topics on Microelectronics Course is improving the knowledge of the participants in the field of the Microelectronics

design, facing different topics and from different perspectives as the microelectronics world is. This Course is then addressed to students

(Master and PhD), researchers, designers.

The course will have the typical ToM course structure with five long lectures (with a sufficient time to give both overview and advanced

details about the topic) given by academic professors or qualified experts coming from companies or research

centers.

The academic and industrial approaches for research and state-of-the art progress are then presented. Different topics are addressed in the Course. This is intentional to give a wide-spectrum for the audience about the present and future challenges in the microelectronics world.

Further details about the lectures, the location and the date of the course are under preparation and will be announced in January 2026.

## **CFU / Hours**

18 hours

## **Teaching period**

Preliminary date June 2026 (to be confirmed)
