

## COURSE SYLLABUS

### Human Sciences

2627-1-I0108D006

---

#### Aims

The course aims to enable students to acquire knowledge regarding the social, anthropological, and clinical-psychological aspects of the midwifery profession, to adequately contextualize their profession within a complex framework of relationships and operational networks, from a historical-anthropological perspective, and to understand individual and collective psychological mechanisms of human functioning.

1. Knowledge and Understanding

By the end of the course, students will be able to:

Know the fundamental principles of the social, anthropological, and clinical-psychological aspects pertinent to the midwifery profession.

Identify the main individual and collective psychological mechanisms that influence human functioning.

2. Applying Knowledge and Understanding

By the end of the course, students will be able to:

Apply acquired knowledge in social, anthropological, and psychological fields to adequately contextualize their profession within complex operational networks and relational contexts.

Utilize psychological concepts and humanistic perspectives to understand and respond to the individual and collective emotional and behavioral needs of patients and families in the obstetric setting.

3. Making Judgements

By the end of the course, students will be able to:

Critically evaluate the social, cultural, and psychological factors that influence health choices and patient experiences in obstetrics.

Formulate independent and informed judgments regarding the most appropriate approaches in complex relational situations encountered in professional practice, considering diverse humanistic perspectives.

4. Communication Skills

By the end of the course, students will be able to:

Communicate effectively with patients, families, and multidisciplinary team members, conveying complex information related to humanistic and psychological aspects clearly and empathetically.

5. Learning Skills

By the end of the course, students will be able to:

Develop the learning skills necessary to autonomously continue their professional and personal development in the human sciences, staying updated on new research and best practices in the social, anthropological, and psychological aspects of midwifery.

Reflect critically on their own professional practice from a humanistic perspective, identifying areas for continuous improvement and personal development.

## Contents

Topic of the Human Sciences course is to give students an overview of the anthropological, social and psychological aspects of health care professions.

## Detailed program
