

## *Reading of an article*

The revision of a work must answer the following questions:

- a) the rationale and the purpose are well defined in the introduction?
- b) is the type of study well described and responsive to the objectives?
- c) the description of the case studies (eligibility criteria, completeness of data, exclusions from the analysis etc ...) is exhaustive in the materials and methods?
- d) are the statistical methods used satisfactorily described?
- e) the presentation of the results in tables and figures is appropriate, clear and answers the questions that the study arises?
- f) is the discussion adhering to the results?
