#### CHARACTERISTIC: longitudinal continuity

• I read on the records that .....

• GPs should plan on scheduling follow-up

14/04/21

COMPETENCE
Person centred care

CHARACTERISTIC manages simultaneously both acute and chronic health problems I start wondering where I can start from: is it more important to discover the cause of the abnormal test result and to manage the anxiety connected with the high number of WBC, or is it better to treat the high blood pressure, which is an important risk factor, or to try to understand why she cannot control weight in this period of her life?

•

• Comprehensive approach:

#### CHARACTERISTIC

promotes health and wellbeing  You have several options: Firstly, you should reduce your calorie intake, Secondly, you should walk- at least 10,000 steps a day..."

• Comprehensive approach

LONGITUDINAL CONTINUITY: from birth to death through the whole of life • Episodes of illness

- Acute
- Chronic

• Healthy patient

# Organization of the practice

#### Delivery of the service

## Healthy patient

## Acute patient

## Emergency

# Chronic patient

## **Complex** patient

# Chronic patient

# Chronic diseases

 Two or more concurrent chronic physical, mental, or behavioral health problems in an individual. Year introduced: 2017 Diseases which have one or more of the following characteristics:

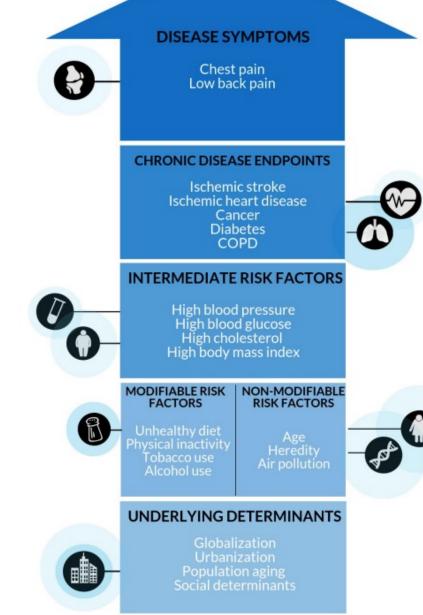

- they are permanent,
- leave residual disability,
- are caused by non-reversible pathological alteration,
- require special training of the patient for rehabilitation,

or may be expected to

• require a long period of supervision, observation, or care.

(Dictionary of Health Services Management, 2d ed)

# From determinants to disease

#### Chronic disease

Chronic condition

14/04/21

healthy

# illness

The patient's personal experience of his or her disease

It is possible for a person to have a disease without being ill (to have an objectively definable, but <u>asymptomatic</u>, medical condition)

and to be ill without being diseased (such as when a person perceives a normal experience as a medical condition, or <u>medicalizes</u> a non-disease situation in his or her life)

#### Chronic disease

Chronic condition

Chronic illness

14/04/21

healthy

# Burdens of disease

- <u>Disease burden</u> is the impact of a health problem in an area measured by financial cost, mortality, morbidity, or other indicators
- The <u>quality-adjusted life year</u> (QALY) and <u>disability-adjusted life</u> year (DALY) metrics are similar, but take into account whether the person was healthy after diagnosis. In addition to the number of years lost due to premature death, these measurements add part of the years lost to being sick

# Misuring health status...

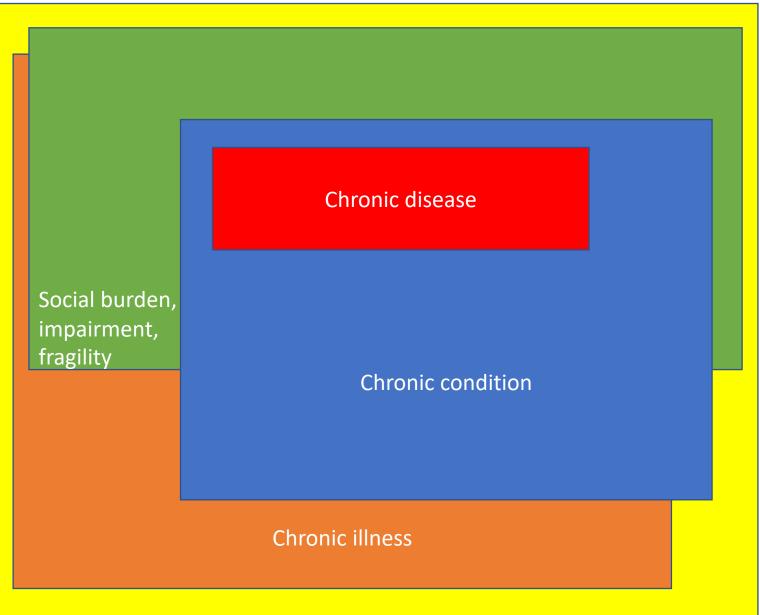

## DALY

Disability Adjusted Life Year is a measure of overall disease burden, expressed as the cumulative number of years lost due to ill-health, disability or early death

 It "extends the concept of potential years of life lost due to premature <u>death</u>... to include equivalent years of 'healthy' life lost by virtue of being in states of poor health or <u>disability</u>."<sup>[2]</sup>In so doing, <u>mortality</u> and <u>morbidity</u> are combined into a single, common metric.

# problem

- Patient's agenda
  - Clinical problems
    - Clinical symptoms
    - Risk behaviour
  - Non-clinical problems
    - Psychologycal
    - Social
    - Existential
  - everything that the patient experiences as a problem, according with Engel's biopsychosocial model

# Number of problems in consultation

In two third of consultations the patient presents one to three problems, but in more than one third of consultations the problems are more than four, to a maximum of nine.

## POMR

# Active Chronic problem

 everything that the patient experiences as a problem, lasting more than six months

*i.e. marital tension, teenager daughter....* 

# Chronic patient: who is he?

- A patient with a chronic disease
- A patient with a chronic condition (risk factor)
- A patient with a chronic illness
- A patient with disability, functional impairment, autonomy loss, social burden
- A patient with a chronic problem, multimorbidity, mild chronicity

# Why it is important to define chronic patient?

- Cost for health system
- Huge phenomenon
- Different consultation

# Different consultation

# Challenges in 21<sup>st</sup> century...

- More elderly people
- More patients with chronic diseases
  - (a disease > 6 month, deminish function or life expectancy)
  - > 25 % of a population has a chr. disease
    - 50% more than one chr. disease
  - > 50 % of all attenders in GP
  - > 80 % of all health care costs
- 5% of population takes 50% of cost to health care
