Introduction to: 'Atomic and Molecular Physics: a primer' xviii

List of symbols xix

Part I Preliminary concepts

1 The overall picture 1-1

1.1 The atomistic structure of matter 1-1

1.1.1 Do atoms exist? 1-1

1.1.2 What are atoms made of? 1-4

1.1.3 The nuclear atom 1-5

1.2 The quantum nature of physical laws 1-7

1.2.1 Atomic spectra: failure of classical physics 1-7

1.2.2 A necessary digression 1-8

1.2.3 Back to atomic spectra: the Bohr model 1-11

1.3 The dual nature of physical phenomena 1-13

1.3.1 Wave–matter duality 1-13

1.3.2 A constitutive equation for matter waves 1-15

References 1-16

2 Essential quantum mechanics 2-1

2.1 The wavefunction 2-1

2.1.1 Definition 2-1

2.1.2 Properties 2-2

2.2 Quantum operators 2-3

2.2.1 Definition 2-3

2.2.2 Building a quantum operator 2-3

2.2.3 Eigenfunctions and eigenvectors 2-4

2.3 Time evolution 2-7

2.3.1 The Schrödinger equation 2-7

2.3.2 Stationary states 2-9

2.3.3 Non-stationary states 2-10
2.3.4 Reconciling quantum and classical physics 2-10
2.4 Systems of identical particles 2-12
2.4.1 Wavefunction symmetry 2-13
2.4.2 Pauli principle 2-14
2.5 Matrix notation 2-16
2.6 Perturbation theory 2-17
2.6.1 The concept of 'perturbation' 2-17
2.6.2 Time-independent perturbations 2-17
2.6.3 Time-dependent perturbations 2-20
References 2-23

Part II Atomic physics

3 One-electron atoms 3-1
3.1 The hydrogen atom 3-1
3.1.1 Problem definition and some useful approximations 3-1
3.1.2 Stationary states: the wavefunctions 3-4
3.1.3 Stationary states: the energy spectrum 3-11
3.1.4 Classifying the electronic shells 3-12
3.1.5 Atomic orbitals 3-13
3.2 Hydrogenic atoms 3-15
3.3 Magnetic moments and interactions 3-17
3.3.1 The action of a uniform magnetic field: the Zeeman effect 3-19
3.3.2 The action of a non-uniform magnetic field: the electron spin 3-21
3.4 Spin–orbit interaction 3-25
3.5 Other relativistic effects 3-30
3.6 Classifying the fine structure levels: the spectroscopic notation 3-32
3.7 Anomalous Zeeman and Paschen–Back effects 3-33
3.8 The action of an electric field 3-35
References 3-37

4 Interaction of one-electron atoms with radiation 4-1
4.1 Emission and absorption of radiation 4-1
4.1.1 Problem definition and some useful approximations 4-1
4.1.2 Emission and absorption 4-2
4.1.3 Einstein coefficients 4-3
4.1.4 Population analysis 4-3

4.2 Microscopic theory of Einstein coefficients 4-5
4.3 Electric dipole selection rules for hydrogenic states 4-7
4.4 Forbidden transitions 4-8
4.5 The LASER 4-9
References 4-10

5 Multi-electron atoms 5-1

5.1 Singlet–triplet states and exchange forces 5-1
5.2 A first step: the helium atom 5-3
5.2.1 The ground state 5-3
5.2.2 The excited states and the exchange interactions 5-5
5.2.3 The total wavefunction and the selection rules 5-7
5.2.4 The Heisenberg picture 5-9
5.3 The central-field approximation 5-10
5.3.1 The self-consistent-field method 5-13
5.3.2 Including spin-related features 5-14
5.4 The periodic system of the elements 5-14
5.5 Beyond the central-field approximation 5-18
5.5.1 Hartree, Hartree–Fock, and configuration interaction methods 5-20
5.5.2 The vector model: L–S and J–J coupling schemes 5-23
5.6 Selection rules 5-28
5.7 The action of an external magnetic field 5-29
References 5-31

Part III Molecular physics

6 Molecules: general features 6-1

6.1 What is a molecule? 6-1
6.2 The Born–Oppenheimer approximation 6-2
6.3 Molecular bonding 6-4
6.3.1 Ionic bonding: the NaCl molecule 6-5
6.3.2 Covalent bonding: the H_2 molecule 6-8
References 6-11

7 Molecular vibrations and rotations 7-1

7.1 Molecular motions in diatomic molecules 7-1
7.1.1 Rotational spectra 7-4
7.1.2 Vibrational spectra 7-6
7.1.3 Roto-vibrational spectra 7-8

7.2 Rayleigh and Raman scattering 7-10
7.3 Nuclear motions in polyatomic molecules 7-11
7.3.1 Rotations 7-12
7.3.2 Vibrations 7-13
References 7-15

8 Electronic structure of molecules 8-1

8.1 Problem definition 8-1
8.2 Molecular orbitals 8-2
8.3 Electronic configurations 8-7
8.3.1 The role of symmetry 8-7
8.3.2 Diatomic molecules 8-10
8.3.3 Polyatomic molecules 8-13
8.3.4 Orbital hybridisation 8-15
8.4 Electronic transitions: the Franck–Condon principle 8-18
References 8-20

Part IV Concluding remarks

9 What is missing in this 'Primer' 9-1

Part V Appendices

A The formal solution of the Schrödinger equation A-1

B The spin–orbit interaction energy in hydrogenic atoms B-1

C The hyperfine structure in hydrogenic atoms C-1

D The 'minimal coupling' scheme D-1

E Screening effects in He atom E-1

F The Thomas–Fermi method F-1

G The formal proof of the Born–Oppenheimer approximation G-1

H The one-dimensional quantum harmonic oscillator H-1
